## Introduction

### Manual Scope

This manual is intended for use by qualified technicians only.

## Product Controls

No.	Part Name	No.	Part Name	No.	Part Name
①	PTT Key	②	SK1 (programmable)	③	SK2 (programmable)
④	Antenna	⑤	Channel Selector Knob	⑥	Radio On-Off/Volume Control Knob
⑦	Speaker	⑧	Microphone	⑨	LED Indicator
⑩	Battery Latch	⑪	Accessory Jack Cover	⑫	Accessory Jack
⑬	Strap Hole	⑭	Belt Clip	⑮	Battery
⑯	Screw	⑰	Charging Piece		

# Software Specifications

## ■ Status Indication

Operations/Functions		LED Indications and Alert Tones
Wired Clone	To enter Wired Clone Mode: Source radio: Power on the radio while holding down the <b>SK1</b> key for approximately 2 seconds. Target radio: turn it on directly.	The LED on the source radio flashes red once during the power-on process.
	Status of the source radio in Wired Clone Mode (After the target radio is turned on and the cloning cable is connected, press the <b>PTT</b> key of the source radio to begin cloning.)	The LED glows red during cloning process. Error occurs during cloning: a. User Clone: At the start of cloning, frequency band and Model ID will be checked. The LED glows orange for 2 seconds and then goes out in presence of any check failure. If the check is successfully carried out but error occurs during cloning, the LED will flash orange. In this case, press any key to turn it off. b. Factory Clone: The LED flashes orange in presence of error. In this case, press any key to turn it off. The LED glows green after cloning is completed.
	Status of the target radio in Wired Clone Mode	The LED glows green during cloning. The green LED goes out after cloning is completed.
Power On (to enter User Mode)		When the radio is turned on, a power-on alert tone sounds and the LED flashes orange once. When the radio is currently on a blank channel, it sounds beep tones continuously.
Low Battery Alert		The LED flashes red, and a low-pitched tone sounds every 20 seconds (programmable by the dealer).
Transmitting		The LED glows red during transmitting. When TOT timer expires, the radio sounds beep tone continuously. A TOT pre-alert tone sounds before the TOT timer expires.
Receiving		The LED glows green during receiving.
Scan		The LED flashes green once per second during scanning. Scan Start Alert (programmable by the dealer): one beep will sound. Scan End Alert (programmable by the dealer): two continuous beeps will sound.

Writing/Reading	The LED glows red when the PC is reading data from the radio. The LED glows green when the PC is writing data into the radio.
Power Adjustment	A low-pitched tone sounds when the radio switches from high power to low power. A high-pitched tone sounds when the radio switches from low power to high power.
VOX / Channel Lock / Monitor	One beep tone for enabling; Two beep tones for disabling.

## ■ Description of Modes

### User Mode

It is a conventional communication mode. The radio will enter this mode by default after power-on.

### PC Programming Mode

The radio in User Mode enters PC Programming Mode through specific protocol based communication with the programming software. In this mode, radio functions and tuning parameters can be set through the programming software (including User Version and Factory Version).

### Wired Clone Mode

#### 1. Description

Wired Clone Mode is an independent mode. To access other modes, you must restart the radio.

Wired Clone Mode includes Clone Mode and Factory Clone Mode.

##### 1) Clone Mode:

Connect two radios using a cloning cable. Power on the source radio while holding down the **SK1** key; and it will enter Clone Mode in approximately 2 seconds. The target radio can be directly turned on to enter the User Mode. In this mode, data stored in EEPROM of the source radio will be cloned to EEPROM of the target radio. The data transferred only involves channel data and common parameters, excluding tuning data, version and serial No. of the model.

##### 2) Factory Clone Mode:

Connect two radios using a cloning cable. Power on the source radio while holding down the **SK1** key, and it will enter User Clone Mode by default in approximately 2 seconds. Afterwards press the **SK1** key again to switch to the Factory Clone Mode. As for the target radio, directly power it on to enter the User Mode. The data transferred covers all data in EEPROM (including settings for the Manual Tune Switch), other than the serial No.

#### 2. Process

- 1) The LED flashes red once after the source radio enters the Wired Clone mode. Press the **PTT** key to begin to clone data to the target radio.

- 2) During cloning, the LED of the source radio glows red, and the LED of the target radio glows green. When cloning finishes, both LEDs go out, indicating that both radios are ready for another cloning.
- 3) If any abnormal situation occurs during cloning, the source radio will stop cloning and its LED will flash orange, indicating that it is ready for another cloning.
- 4) When cloning ends, the source radio goes back to standby status. Press the **PTT** key again to begin another cloning operation.

### Manual Tune Mode

In this mode, you can manually tune the frequency deviation, power level and squelch level and etc.

Description of Tuning:

#### 1. To enter Manual Tune Mode

Hold down the **PTT** and **SK1** key for 2 seconds while powering on the radio. The LED glows orange to indicate that the radio has entered the Manual Tune Mode. After the keys are released, the radio directly enters the TX group by default (the tuning item depends on the position where the **Channel Selector** knob locates).

(Note: To enter the Manual Tune Mode, make sure its switch is set to Open via the programming software. If this switch is set to Close, the radio cannot enter this mode, which helps avoid change of parameters and degradation of radio performance caused by user's misoperations.. Keep this option unchecked after values are well adjusted from factory, to avoid any unexpected change of values. Such values can only be reset and changed in Manual Tune Mode only. )

#### 2. To switch between TX tuning items and RX tuning items

Rotate the **Channel Selector** knob to switch between TX tuning items and RX tuning items.

The LED glows red for TX tuning items and green for RX tuning items.

#### 3. To switch between tuning items within TX group/RX group

TX group: CH1 to CH9 respectively represent TX Low Power, TX High Power, CDCSS Balance, CDCSS Deviation, CTCSS Deviation (low), CTCSS Deviation (medium), CTCSS Deviation (high), TX Low Voltage Threshold and Max. TX Audio Deviation.

The LED solidly glows red during TX group tuning (CH1 to CH9).

RX group: CH10 to CH13 respectively represent SQL Normal Open, SQL Normal Close, RX Low Voltage Threshold and Bandpass Filter.

The LED solidly glows green during RX group tuning (CH10 to CH13).

The LED goes out upon invalid items (CH14 to CH16).

#### 4. To switch between wide and narrow band

Under a certain tuning item, long press the **PTT** key (the LED flashes orange to indicate valid press) to switch between wide and narrow bands. After the band is selected, the first frequency of the current band is the frequency for tuning by default.

#### 5. To switch the frequency

Under a certain band, short press the **PTT** key (the LED flashes green to indicate valid press) to switch the frequency orderly.

#### 6. To tune the value

Under a certain band, short press the **SK1** key to increase the value in step of 1, or hold down this key to increase the value continuously in steps of 1. The value will remain unchanged once it reaches the allowed maximum value.

Short press the **SK2** key to decrease the value in step of 1, or hold down this key to decrease the value continuously in steps of 1. The value will remain unchanged once it reaches the allowed minimum value.

#### 7. About several special items

TX group: CH8 represents TX Low Voltage Threshold, which is related to AD sampling. Press the **SK1** or **SK2** key after entering the above item, to activate AD sampling (including calculation) once.

Rotate the **Channel Selector** knob to save the current AD sampling value.

RX group: CH10 to CH12 represent SQL Normal Open, SQL Normal Close and RX Low Voltage Threshold respectively, which are related to AD sampling. Press the **SK1** or **SK2** key after entering the above items, to activate AD sampling (including calculation) once. Rotate the **Channel Selector** knob to save the current AD sampling value.

#### 8. About the Key-press

Short press: key-press time shorter than 1 second;

Long press: key-press time longer than 1 second.

# Circuit Description

## 1. General Principle Diagram

The general circuit is composed of TX circuit, RX circuit, power supply circuit, control circuit and etc. See the block diagram below:

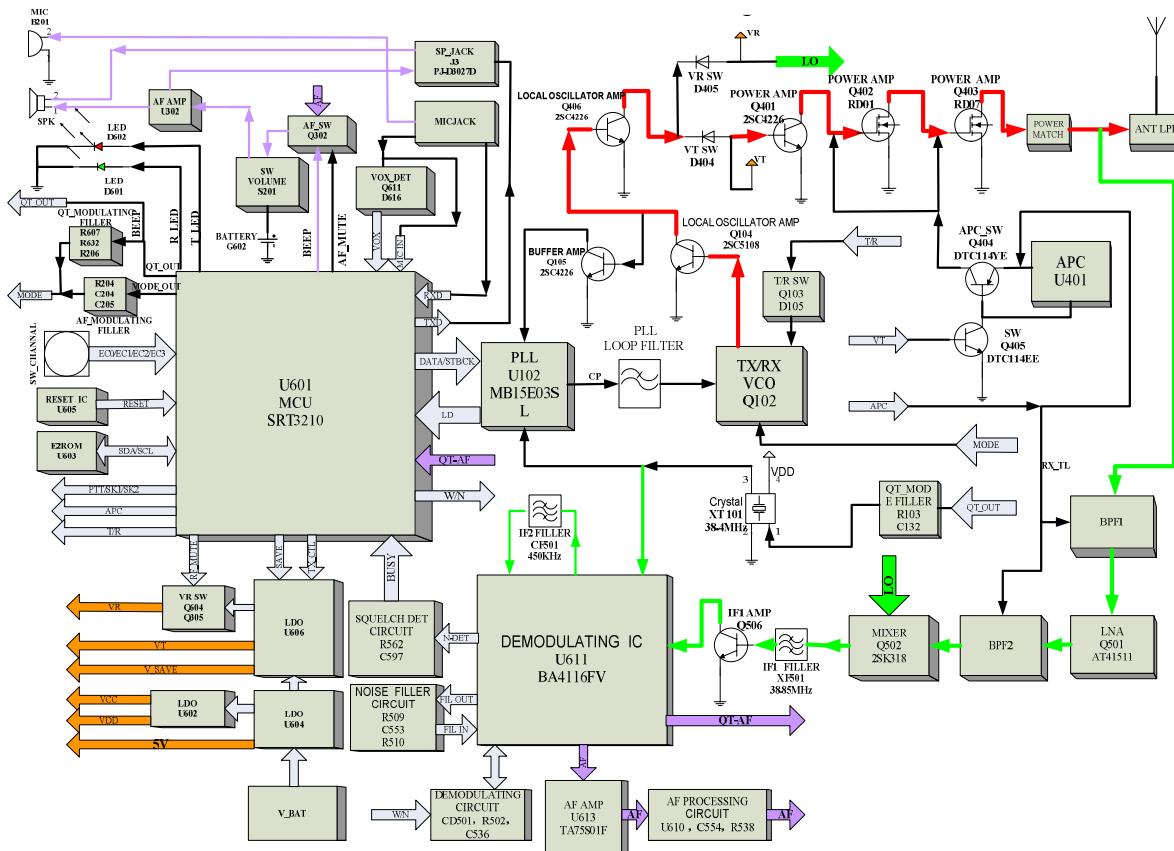

Figure 1

**TX Section:** The audio signal from MIC is sent to the MCU chip (U601) directly. The baseband signal processing circuit in U601 converts the amplified audio signal to digital signal via A/D conversion, and then converts the digital signal to analog audio signal via D/A conversion after all processing procedures such as filtering, signal compression, encryption, pre-emphasis, TX gain control and amplitude limiting are completed. Then the analog audio signal from MCU passes through the low-pass filter circuit and directly goes to VCO for frequency modulation. The modulated HF carrier signal passes through the buffer amplifiers (Q104 and Q406), and goes to the amplifier (Q401) through the RF switch (D404). Then the amplified RF signal enters the low-pass filter circuit after it is further amplified by the pre-driver (Q402) and final-stage power amplifier (Q403), and then it will be finally transmitted via antenna after ultra harmonics is removed.

**RX Section:** RF signals received via the antenna are fed to the band-pass filter to filter out undesired out-of-band interference signal. Then the remaining RF signals are amplified by LNA Q501. Afterwards, the amplified signal goes through the bandpass filter again to filter out undesired out-of-band interference signal. Next, the RF signals will be mixed with the first local oscillator signal at Q502. Then

the newly generated signals will be processed by crystal filter XF501 to produce 38.85M the first IF signal. After being amplified, the IF signal goes via Q506 to the chip U611, where the IF signal will be mixed with the second local oscillator for the second time to produce the 450KHz second IF signal. After filtered by 450KHZ ceramic filter, U611 demodulates the IF signal to output audio signal, which will be delivered to Q613 for amplification and output in two channels. After simple filtering, one of the channels is fed to MCU U601 for CTCSS/CDCSS decoding; For the other channel, it goes through two stages of low-pass filter first, and then it goes to high-pass filter (consisting of 4 operational amplifiers) for audio processing. Finally, the signals will be sent to audio power amplifier U302 for amplification so as to drive the speaker.

**Power Supply Section:** The 7.4V battery voltage is converted to 5V via DC-DC module U604, and further converted via LDO U602 to 3V including two channels: VCC and VDD. VCC powers CPU and VDD powers PLL circuit. The 5V voltage will be converted via LDO U606 to 4.5V including two channels: VT and V-SAVE. V-SAVE powers VCO circuit and VT powers TX circuit. Finally, V-SAVE controlled by Q604 and Q305 outputs VR, which supplies RX circuit.

## 2. Realization Methods of Basic Functional Modules

### 2.1 PLL Frequency Synthesizer

The PLL circuit mainly provides the first local oscillator signal (for RX) and RF carrier signal (for TX). It is composed of VCO and PLL chip, allowing frequency tracking and channel switching under the control of MCU signals.

#### 1) PLL

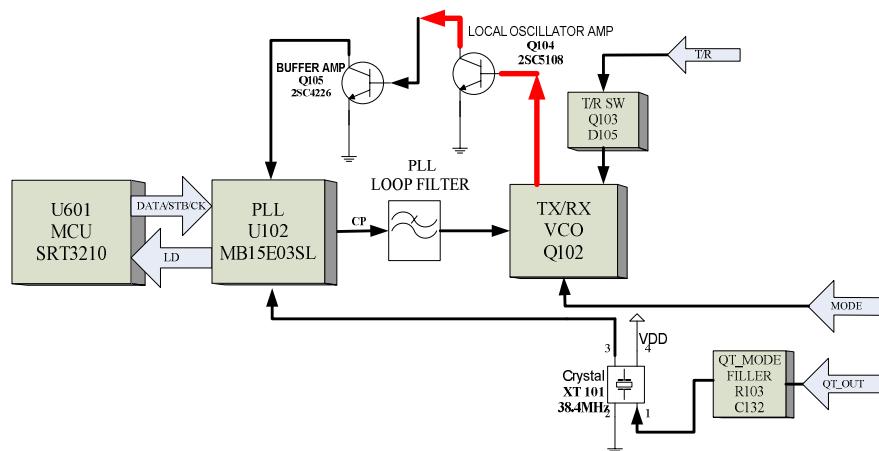

Figure 2

The step frequency of PLL circuit is 5 KHz or 6.25 KHz. In U101, the 38.4MHz reference oscillator signal is divided into 5 KHz or 6.25 KHz reference frequency via a fixed counter in PLL. The signal from VCO enters the PLL after processed by the buffer amplifier, and then it is applied to the variable frequency divider in PLL for division. After division, the signal is compared with the reference frequency at the phase detector (PD) in PLL. The signal from the PD passes through a low-pass filter and then is applied to the varactors (D101 and D102) of VCO to control the output frequency. Then the RF signal is processed by the buffer amplifiers (Q104 and Q406), and controlled by D404 and D405 to only serve as

TX signal or RX first local oscillator signal.

## 2) VCO

The VCO section is realized by the three-point capacitor oscillator circuit. TX VCO and RX VCO share the same oscillator circuit. Q103 controls the switch between TX VCO and RX VCO.

Note: If the PLL is unlocked, the LD pin of U101 outputs low level. If the microprocessor detects such situation, TX/RX operation is prohibited, and an alarm sounds.

## 2.2 RF Power Amplifier Circuit (TX Section)

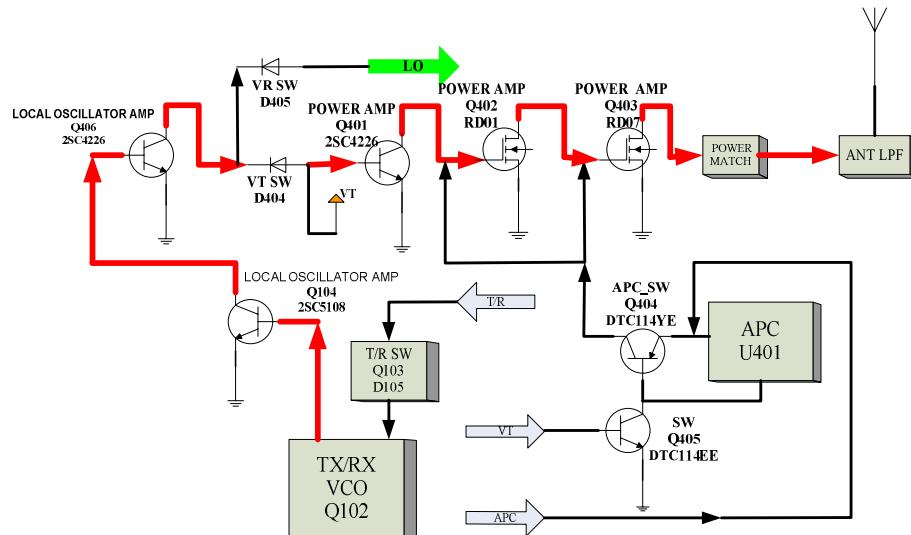

Figure 3

The modulated carrier signal from VCO is pre-amplified at Q104 and Q406, and controlled at D404 and D405. Then it is amplified by the front-stage amplifier Q401, the pre-driver Q402 and the final-stage amplifier Q403 orderly. Finally it goes to the LC low-pass filter (LPF) and is transmitted from the antenna after high-order harmonics are removed by LPF.

APC circuit is composed of Q404, Q405 and U401. U401 controls the bias voltage at the gates of Q402 and Q403, to control TX current and to further regulate power.

## 2.3 RX LNA and Mixer Circuit (RX Section)

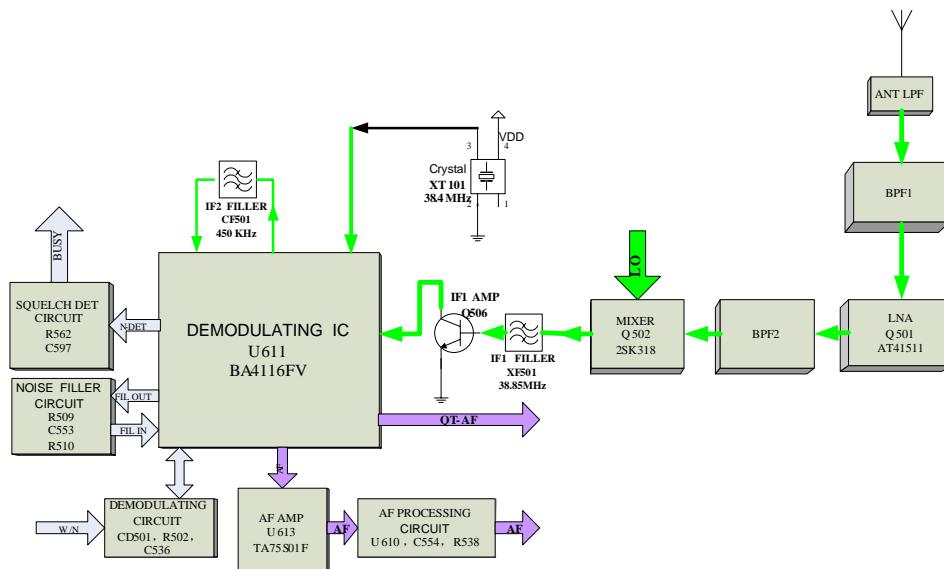

Figure 4

After the RF signals are received from the antenna, the undesired out-of-band signals are filtered out at the bandpass filter. Then the remaining RF signals are amplified by LNA Q501. Afterwards, the amplified signal goes through the bandpass filter again to eliminate undesired out-of-band interference signal. After being filtered and amplified, the RF signals and first LO signals are mixed at Q502, and then the mixed signal is filtered by crystal filter XF501 to get 38.85MHz differential signals as the first IF signal. After being amplified by Q506, the IF signal goes to chip U611, where the signal will be mixed with the second LO signal (38.4MHZ). Next, the signals will be filtered by CF501 to produce 450KHz IF signal. When the IF signals are processed by demodulation circuit (including U611 and CD501) to generate audio signals, which are delivered to IC Q613 for amplification and output in two channels. After simple filtering, one channel of signals is sent to MCU U601 for CTCSS/CDCSS decoding; for the other channel, it goes through two stages of low-pass filter first, and then it goes to high-pass filter U610 (consisting of four operational amplifiers) for audio processing. Finally, the signals will be sent to audio power amplifier U302 for amplification so as to drive the speaker.

#### 2.4 MCU Control, Signal Processing and Audio Power Amplification

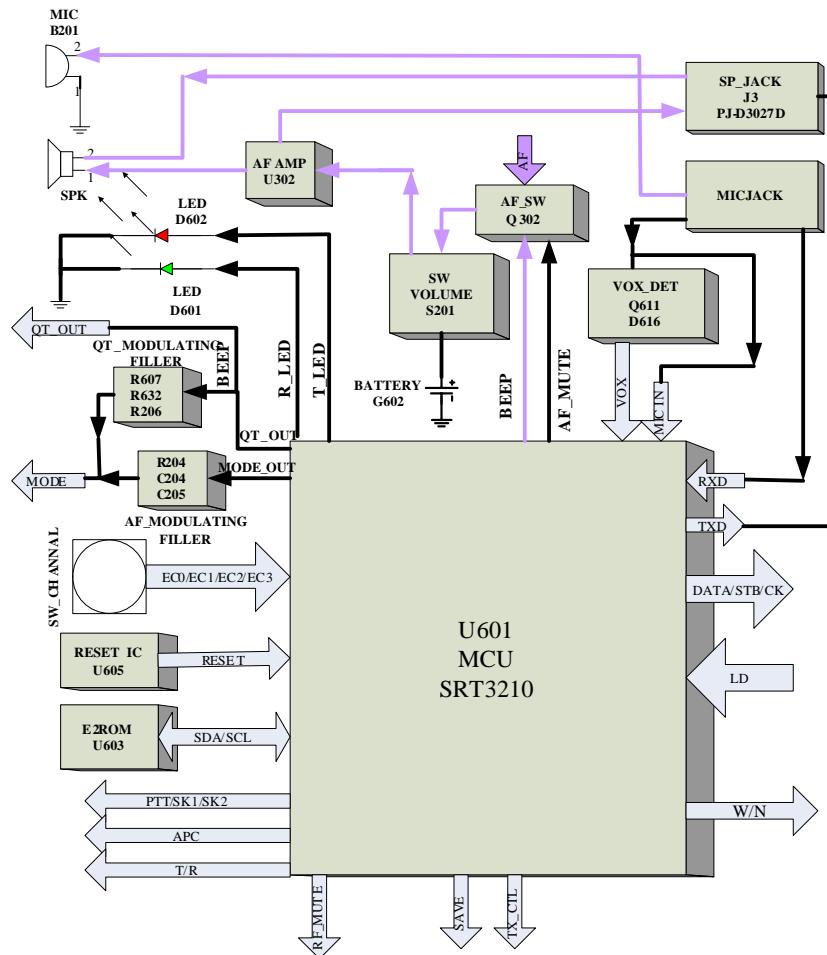

Figure 5

**1) MCU Control Circuit**

MCU control circuit is composed of MCU, EEPROM, and keys, etc. This section has the following functions: to initialize data of the radio and save data to EEPROM; to detect battery voltage and signals from external keys, LD and VOX, and to make response; to transmit required data to PLL based on the channel encoding status; to switch and control RX/TX based on the input PTT signal; to switch the squelch circuit on/off based on the input signaling decode signal and squelch level signal; to control circuits of high/low power switch, audio power amplifier, VCO power supply, RX power supply and TX power supply; (for programming) to communicate with PC via RXD/TXD based on the RS232 protocol, and transmit/receive data to/from PC.

**2) Signal Processing Circuit****a. TX Baseband Processing**

The audio signals input from MIC are divided into two parts. One part enters U601, and is then converted into digital signal by analog-to-digital conversion (ADC). Afterwards, the converted signal will go through a series of processing including low-pass filtering, AGC, companding, high-pass filtering, encrypting and pre-emphasizing, and then it will be output as baseband signal after digital-to-analog conversion (DAC).

The baseband signal is processed by the active low-pass filter and then sent to VCO for modulation; for the other part, it will go through VOX circuit (Q611 and D616) and then sent to MCU for VOX processing.

**b. RX Baseband Process**

The demodulated IF signals with CTCSS/CDCSS signaling enter U601 for decoding. After analog-to-digital conversion, the IF signals will be converted into digital signals, which go to low-pass filter for filtering and then are divided into two parts. One part is processed by CTCSS/CDCSS decoder, and the other is processed by high-pass filter and then is subject to de-emphasis, decryption, signal expansion etc, and finally digital-to-analog conversion to output audio signal.

**3) Audio Power Amplifier**

The audio signal output from U601 is amplified by the audio power amplifier (U302) to drive the speaker directly.

## 2.5 Power Supply Section

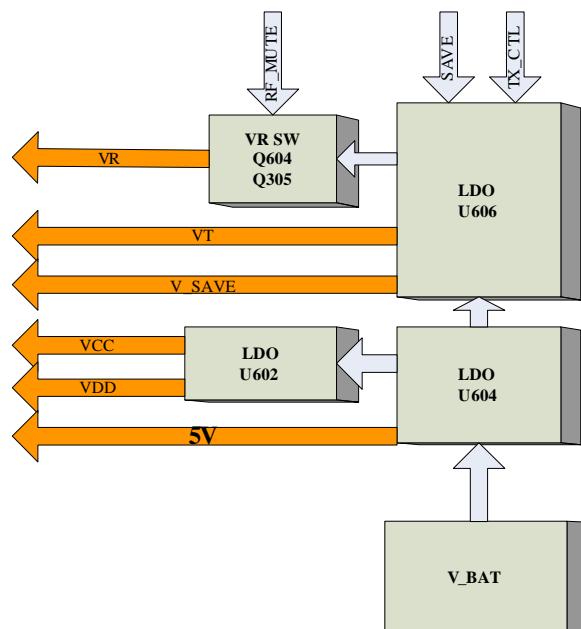

Figure 6

Power Supply Section: The 7.4V battery voltage is converted to 5V via DC-DC module U604, and further converted via LDO U602 to 3V including two channels: VCC and VDD. VCC powers CPU and VDD powers PLL circuit. The 5V voltage will be converted via LDO U606 to 4.5V including two channels: VT and V-SAVE. V-SAVE powers VCO circuit and VT powers TX circuit. Finally, V-SAVE controlled by Q604 and Q305 outputs VR, which supplies RX circuit.

**CPU Pins**

Pin No.	Port Name	Pin Name	I/O	Function
1	NC	/	/	/
2	NC	/	/	/
3	NC	/	/	/
4	NC	/	/	/
5	NC	/	/	/
6	TXD	TXD	O	UART TxD
7	RXD	RXD	I	UART RxD
8	P60	APA_EN	O	Speaker control pin (H: on; L: off)
9	P61	SAVE_CTL	O	Battery save control pin. In non-battery-save status, it is set to high level.
10	P62	EXT MIC	I	For checking MIC connection (valid at high level)
11	P63	EXT PTT	I	Earpiece PTT input pin (valid at high level)
12	P64	Red LED	O	Red LED indicator pin
13	P65	Green LED	O	Green LED indicator pin
14	P66	R/T	O	For TX/RX control (H: RX; L: TX)
15	P67	RX_CTRL	O	For RX power control (valid at high level)
16	Vssd	GND	S	Power ground for digital circuit
17	Vddd	VCC (3.0V)	S	Power supply for digital circuit
18	P50/INT0	Reserve	O	Reserved
19	P51/INT1	Reserve	O	Reserved
20	P52/INT2	Reserve	O	Reserved
21	P53/INT3	SK2	I	Programmable SK2 pin (valid at low level, connected with pull-up resistor)
22	P54/INT4	SK1	I	Programmable SK1 pin (valid at low level, connected with pull-up resistor)
23	P55/INT5	PTT	I	PTT key pin (valid at low level, connected with pull-up resistor)
24	P56/INT6	Reserve	O	Reserved
25	P57/INT7	Reserve	O	Reserved
26	Vdd_CLD	VCC (3.0V)	S	Power supply for digital power amplifier
27	CLD_OUTP	CLD_OUTP	O	Positive output of digital power amplifier
28	VSS_CLD	GND	S	Power ground for digital power amplifier

29	CLD_OUTM	Reserve	O	Negative output of digital power amplifier
30	Vdd_CLD	VCC (3.0V)	S	Power supply for digital power amplifier
31	P77	Reserve	O	Reserved
32	P76/DAC1	APC/TU	DA	TX power control/ RX bandpass control pin
33	P75/VREF	VCC(3.0V)	I	ADC and DAC reference voltage input pin
34	P74/DAC0	QT_OUT	DA	CTCSS/CDCSS output pin
35	P73/AD3	VOX	AD	For detecting VOX
36	Vssa	GND	S	Power ground for analog circuit
37	Vdda	VCC (3.0V)	S	Power supply for analog circuit
38	P72/AD2	Reserve	AD	Reserved
39	P71/AD1	SQL	AD	For detecting noise
40	P70/AD0	BAT_DET	AD	For detecting battery strength
41	XTAL0	OSC0		For connecting 32.678KHz main crystal oscillator
42	XTAL1	OSC1		
43	PLL_CAP	PLL_CAP		For connecting PLL external capacitor (10nF)

## Tuning Description

### I Required Test Instruments

Radio communication test set (HP8921)	1 set
10V/3A regulated DC power supply	1 set
Digital voltmeter	1 set
Ammeter	1 set

### II Preparation

Place the board to be tested on the test fixture (please ensure good connection between each test point and the fixture), and connect the board to a power supply with DC voltage of 7.4V.

### III Tuning Procedures

#### 1. Description of Tuning Procedures:

- 1) Hold down **PTT** and **SK1** for more than 2 seconds while powering on the radio. At this time, the LED glows orange when the radio enters the Tuning Mode. After the keys are released, the radio will enter the tuning item in this mode (the item depends on the position where the **Channel Selector** knob locates). And LED will glow red or green according to the specific tuning item. Or
- 2) Connect a programming cable to the radio for real-time tuning in PC Programming Mode.

#### 2. Description of Tuning Items:

Channel No.	Tuning Item	Tunable Frequency					
		Wide Band			Narrow Band		
		Low	Medium	High	Low	Medium	High
1	TX Low Power	Y	Y	Y			
2	TX High Power	Y	Y	Y			
3	CDCSS Balance	Y	Y	Y	Y	Y	Y
4	CDCSS Deviation	Y	Y	Y	Y	Y	Y
5	CTCSS Deviation (67Hz)	Y	Y	Y	Y	Y	Y
6	CTCSS Deviation (151.4Hz)	Y	Y	Y	Y	Y	Y
7	CTCSS Deviation (254.1Hz)	Y	Y	Y	Y	Y	Y
8	TX Low Voltage Threshold		Y				
9	Max. TX Audio Deviation	Y	Y	Y	Y	Y	Y
10	SQL Normal Open	Y	Y	Y	Y	Y	Y
11	SQL Normal Close	Y	Y	Y	Y	Y	Y
12	RX Low Voltage Threshold		Y				
13	Bandpass Filter	Y	Y	Y			

Note: Y indicates frequencies available for tuning, and the rest are blank channels without tuning items.

#### 3. Specific Operations and Requirements:

- 1) Conventional Tuning Items (outside the tuning mode): TX Frequency Tolerance and VCO Lock Voltage.

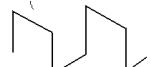

Note: CH1, CH2 and CH3 have been preset as low, medium and high frequencies respectively for wide bands and CH4, CH5 and CH6 as low, medium and high frequencies respectively for narrow bands. Make sure the antenna or load is connected before tuning.

Item	Condition	Measurement		Tuning		Specifications / Remarks
		Test Instrument	Test Point	Part	Method	
TX Frequency Tolerance	Set to CH1, and hold down <b>PTT</b> to transmit.	Communication test set	Antenna connector	VR101	Tune VR101 with ceramic tuning tool to control the center frequency within the error range.	$\leq 150\text{Hz}$
TX VCO Lock Voltage	Set to CH3, and hold down <b>PTT</b> to transmit.	Digital voltmeter	CV	TC101	Tune TC101 with ceramic tuning tool until the lock voltage meets the requirements.	3V - 4V
	Set to CH1, and hold down <b>PTT</b> to transmit.				Check	$\geq 0.5\text{V}$
RX VCO Lock Voltage	Set to CH3.		TC101		Check	3V - 4V
	Set to CH1.				Check	$\geq 0.5\text{V}$

## 2) Tuning in the mode

Note: Make sure that the antenna or load is connected before tuning; rotate the **Channel Selector** knob to save the value.

Item	Condition	Measurement		Tuning		Specifications / Remarks
		Test Instrument	Test Point	Part	Method	
TX Power	High	Set to CH2 (low frequency).	Communication test set Ammeter	Antenna connector	Press <b>SK1</b> or <b>SK2</b> to tune the output power, and rotate the <b>Channel Selector</b> knob to save it.	4 - 4.4W $I \leq 1.4\text{A}$
		Short press <b>PTT</b> to switch among different frequencies (low, medium and high).				
	Low	Set to CH1 (low frequency).			Press <b>SK1</b> or <b>SK2</b> to tune the output	$2\text{W} \pm 0.3\text{W}$ $I \leq 1\text{A}$

		Short press <b>PTT</b> to switch among different frequencies (low, medium and high).			power, and rotate the <b>Channel Selector</b> knob to save it.	
CDCSS Balance		<p>Set to CH3. At this time, “wide bandwidth” and “low frequency” are selected.</p> <p>Short press <b>PTT</b> to switch among different frequencies (low, medium and high), and long press this key to switch between wide and narrow bands.</p>		VR601	<p>Make the waveform similar to square waveform.</p> 	
CDCSS Deviation	Wide Band	<p>Set to CH4. At this time, “wide bandwidth” and “low frequency” are selected.</p> <p>Short press <b>PTT</b> to switch among different frequencies (low, medium and high).</p>	Communication Test Set BFP: <20Hz~300 Hz	Antenna connector	<p>Press <b>SK1</b> or <b>SK2</b> to make tuning until the CDCSS deviation meets the requirements.</p>	500 - 900Hz
	Narrow Band	<p>Long press <b>PTT</b> to enter narrow band (low frequency).</p> <p>Short press <b>PTT</b> to switch among different frequencies (low, medium and high).</p>			<p>Press <b>SK1</b> or <b>SK2</b> to make tuning until the CDCSS deviation meets the requirements.</p>	300 - 500Hz
CTCSS Deviation	Wide Band	<p>Set to CH5, CH6 and CH7, with CTCSS respectively to low, medium and high. At this time, “wide band” is selected. Short press <b>PTT</b> to switch frequencies</p>	Communication Test Set BPF: <20Hz~300 Hz	Antenna connector	<p>Press <b>SK1</b> or <b>SK2</b> key to make slight tuning until the CTCSS deviation meets the requirements.</p>	500 - 900Hz

		on each channel.				
	Narrow Band	On CH5, CH6, and CH7, long press <b>PTT</b> to enter narrow band, and short press <b>PTT</b> to switch frequencies.			Press <b>SK1</b> or <b>SK2</b> key to make slight tuning until the CTCSS deviation meets the requirements.	300 - 500Hz
TX Low Voltage Threshold	Set to CH8		Digital voltmeter	Power Supply Port	Tune the output voltage to 6.4V, and press <b>SK1</b> to sample the value, finally rotate the <b>Channel Selector</b> knob to save it.	When the value is $6.4 \pm 0.1$ V, an alert tone will sound to indicate transmission inhibition.
Maximum Frequency Deviation	Wide Band	Set to CH9. At this time, "wide bandwidth" and "low frequency" are selected. Short press <b>PTT</b> to switch among different frequencies (low, medium and high). Long press <b>PTT</b> to switch to narrow band.	Communication Test Set BPF: <20Hz - 15kHz AF: 1kHz 120mV	Power Supply	Apply <b>SK1</b> or <b>SK2</b> to ensure that the value meets the requirements. After tuning is completed, rotate the <b>Channel Selector</b> knob to save.	4.2 - 4.7KHz
Modulation Sensitivity	Narrow Band	Set to CH9. At this time, "wide bandwidth" and "low frequency" are selected. Short press <b>PTT</b> to switch among different frequencies (low, medium and high). Long press <b>PTT</b> to	Communication Test Set BPF: <20Hz - 15Hz AF: 1kHz $9 \pm 4$ mV	Antenna connector Accessory Jack	Check	1.9 - 2.4KHz 3.0KHz 1.5KHz

		switch to narrow band.				
Squelch On	Wide Band	Set to CH10 and SQL On 5. Press <b>SK1</b> or <b>SK2</b> key to sample the current value. At this time, "wide band" and "low frequency" are selected. Short press <b>PTT</b> to switch among different frequencies (low, medium and high).	Communication test set SSG: -123dBm MOD: 1KHz DEV: 3KHz Filter: 0.3 - 3KHz	Antenna connector Accessory Jack	Tune the output signals of SSG to the squelch level. Rotate the <b>Channel Selector</b> knob to save the value after three-point tuning.	Squelch level 5: -123±1dBm
	Narrow Band	Long press <b>PTT</b> to enter narrow band, and press <b>SK1</b> or <b>SK2</b> to sample the current value. Short press <b>PTT</b> to switch the frequency.	Communication test set SSG: -121dBm MOD: 1KHz DEV: 1.5KHz Filter: 0.3 - 3KHz		Sam as above	Squelch level 5: -121±1dBm
Squelch Off	Wide Band	Set to CH11 and SQL Off 5. Press <b>SK1</b> or <b>SK2</b> to sample the current value. At this time, "wide band" and "low frequency" are selected. Short press <b>PTT</b> to switch frequencies.	Communication test set SSG: -126dBm MOD: 1KHz DEV: 3KHz Filter: 0.3 - 3KHz	Antenna connector Accessory Jack	Tune the output signals of SSG to the squelch level. Rotate the <b>Channel Selector</b> knob to save the value after three-point tuning.	Squelch level 5: -125±1dBm
	Narrow Band	Long press <b>PTT</b> to enter narrow band, and press <b>SK1</b> or <b>SK2</b> to sample the current value. Short press <b>PTT</b> to switch the frequency.	Communication test set SSG: -124dBm MOD: 1KHz DEV: 1.5KHz Filter: 0.3 - 3KHz		Sam as above	Squelch level 5: -123±1dBm
RX Low Voltage Threshold	Set to CH12.		Digital voltmeter	Power Supply Port	Power Supply	Tune the output voltage to 7.0V, and press <b>SKI</b> to sample the
						When the value is 6.9±0.1V, an alert tone will be

					value, finally rotate the <b>Channel Selector</b> knob to save it.	given with red LED flashing.	
RX Sensitivity (Bandpass)	Wide Band	<p>Set to CH13 (low frequency).</p> <p>Short press <b>PTT</b> to switch among different frequencies (low, medium and high).</p>	<p>Communication test set SSG: -119dBm MOD: 1KHz DEV: 3.0KHz Filter: 0.3 - 3KHz</p>	<p>Antenna connector Accessory Jack</p>	<p>SK1 SK2</p>	<p>Check the bandpass waveform, and use <b>SK1</b> and <b>SK2</b> to perform tuning. After three-point tuning is completed, rotate the <b>Channel Selector</b> knob to save.</p>	<p>Rotate the <b>Volume Control</b> knob to a proper location until the output amplitude is not limited. SINAD: <math>\geq 12\text{dB}</math></p>

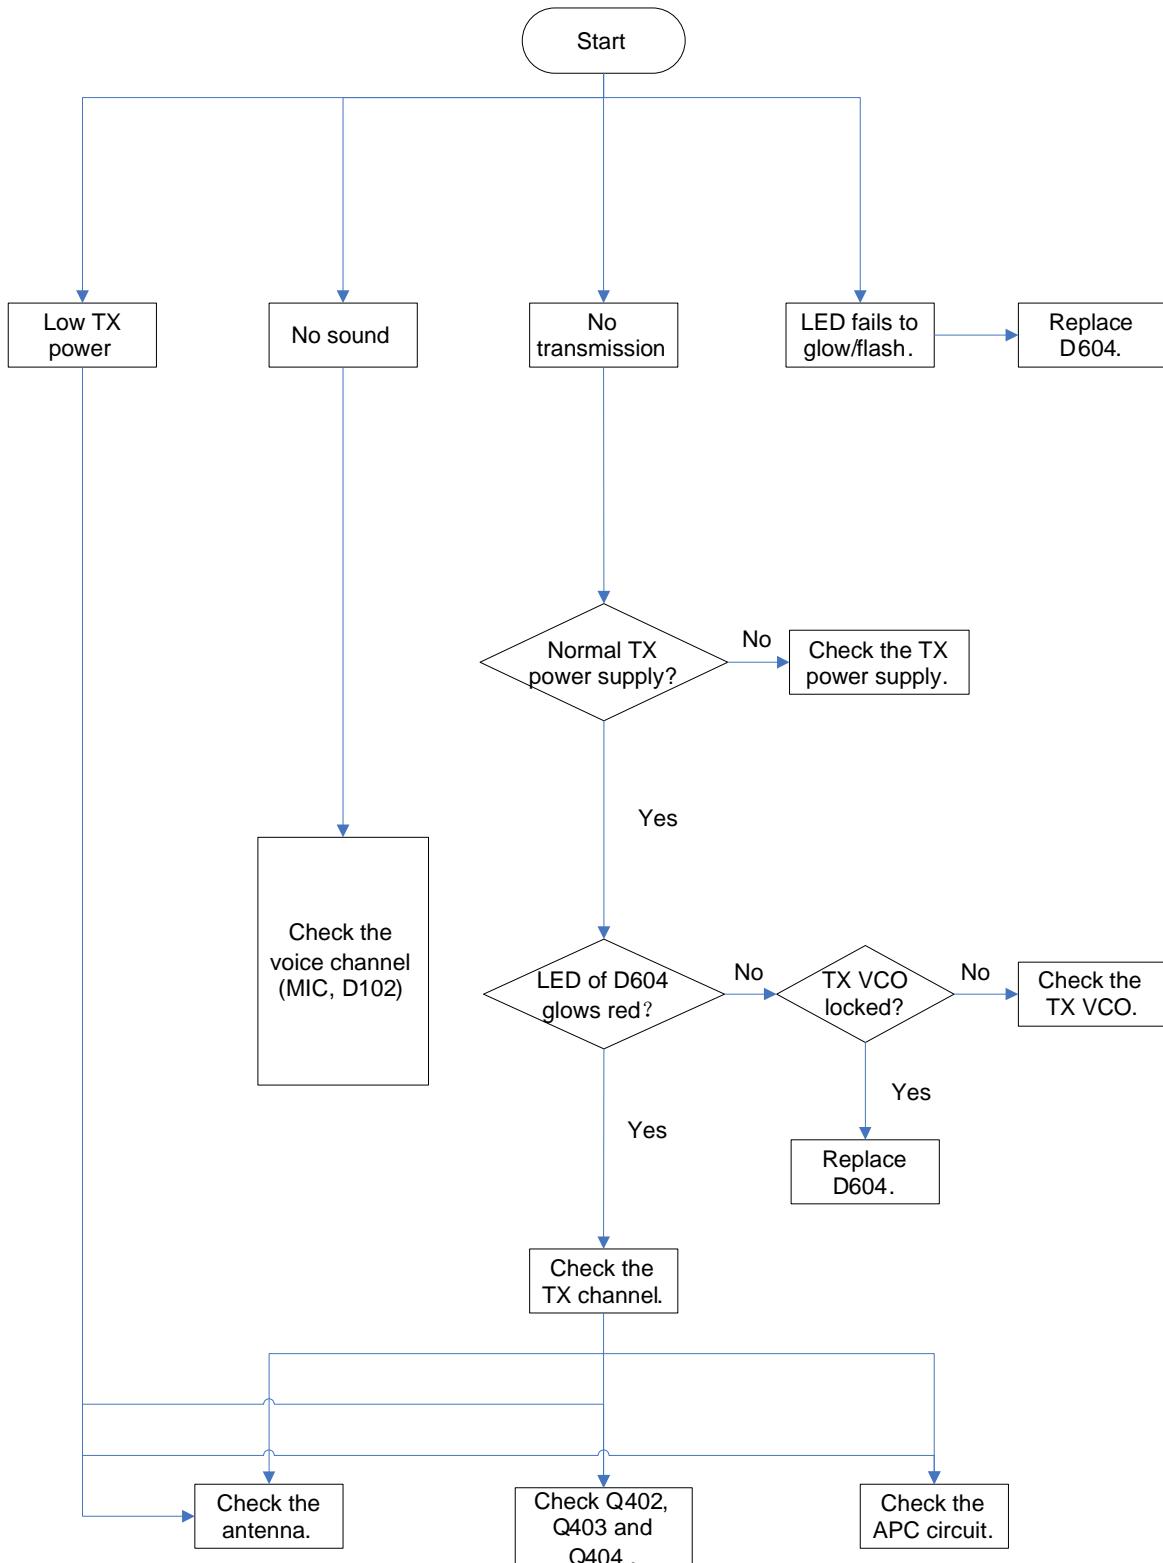

**Appendix 1:****Reference Value for Source Radio**

Test Item	Wide Band			Narrow Band		
	Freq. 1	Freq. 2	Freq. 3	Freq. 1	Freq. 2	Freq. 3
TX Low Power	38	40	39	/	/	/
TX High Power	83	81	83	/	/	/
CDCSS Balance	Dependent on the waveform.					
CDCSS Deviation	87	85	87	50	51	52
CTCSS Deviation (67Hz)	119	120	119	75	72	71
CTCSS Deviation (151.4Hz)	121	123	135	73	71	80
CTCSS Deviation (254.1Hz)	133	135	137	79	83	89
TX Low Voltage Threshold		173			173	
Max. TX Audio Deviation	126	128	136	58	60	63
SQL Normal Open	39	40	43	31	32	35
SQL Normal Close	53	51	55	46	45	45
RX Low Voltage Threshold		186			186	
Bandpass Filter	76	123	173	/	/	/

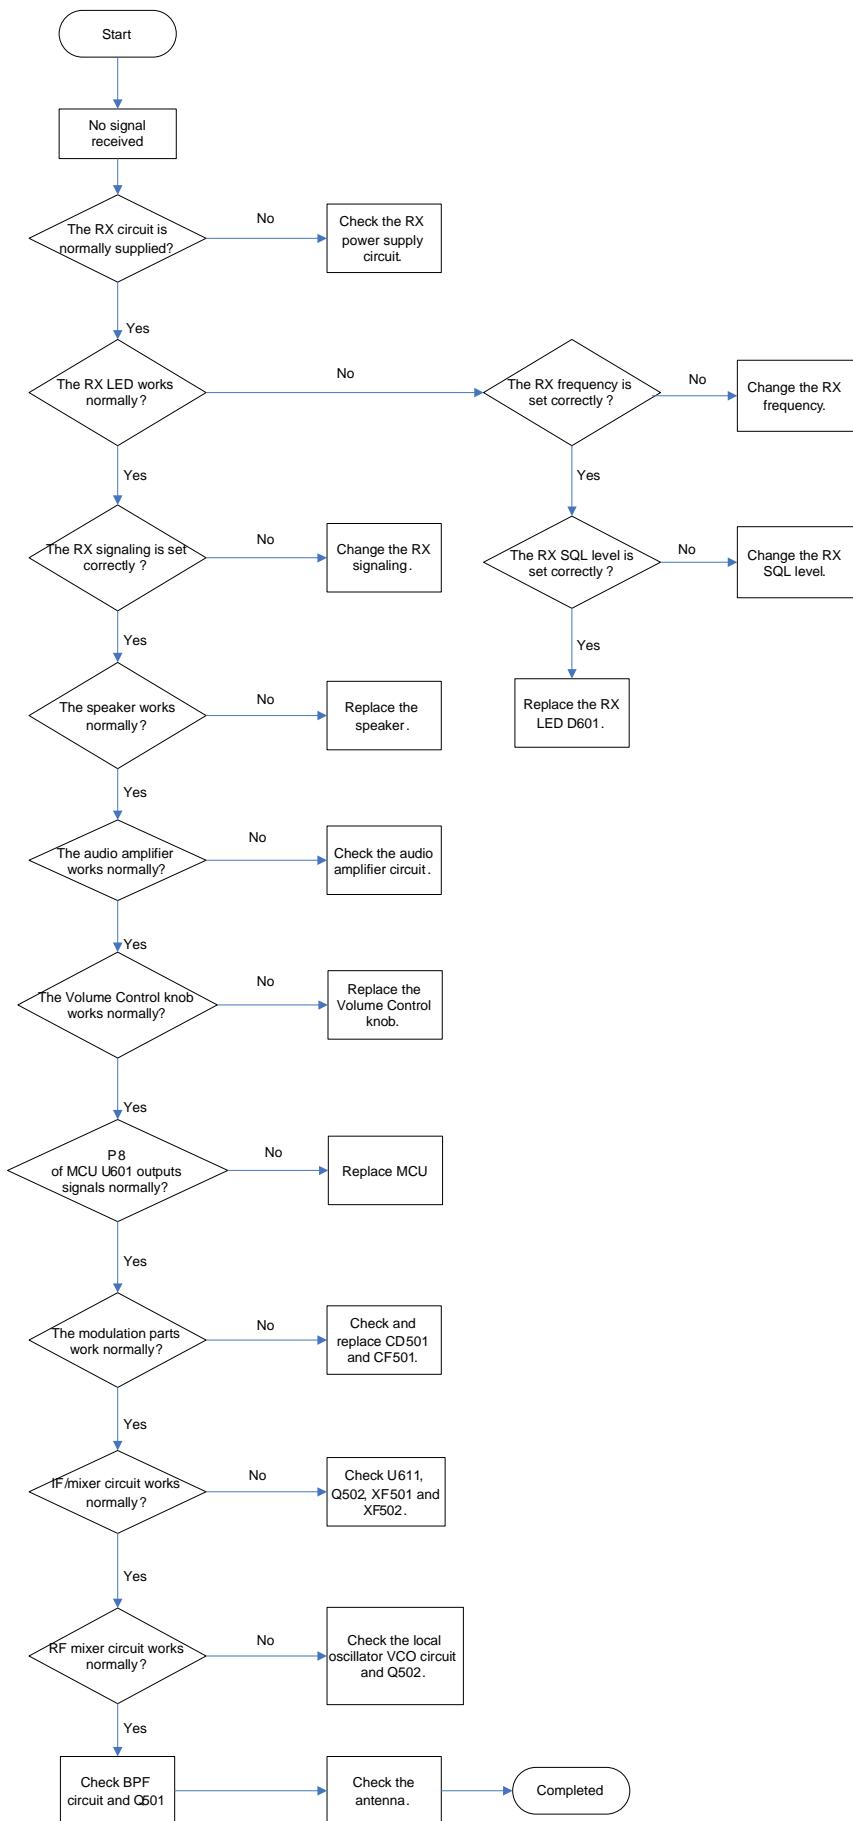

Note: The value is subject to that of the source radio.

## Troubleshooting Flow Chart

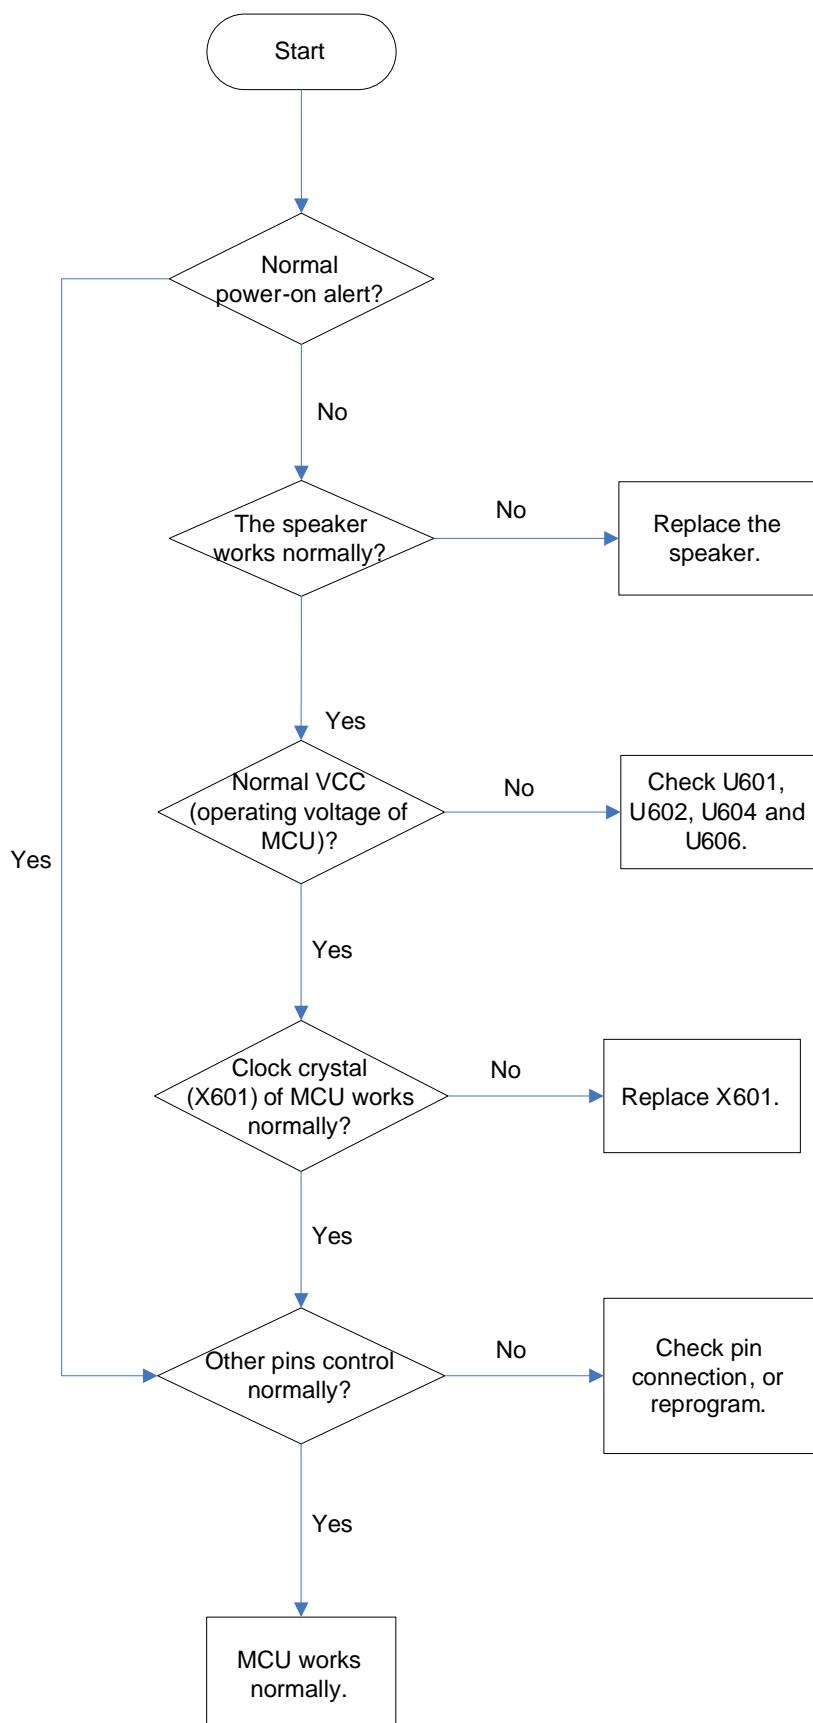

### TX Circuit

## RX Circuit

## MCU

## Disassembly and Assembly

### Disassembling the chassis

1. Remove the Antenna, Channel Selector knob and Radio On-Off/Volume Control knob.
2. Unscrew the nuts for the channel selector knob and the volume control knob.
3. Unscrew the two screws with a screwdriver at the bottom of the radio.
4. Lift the chassis by 25 degrees and pull it backwards.
5. Unsolder the speaker cable with an electric iron and remove the chassis.

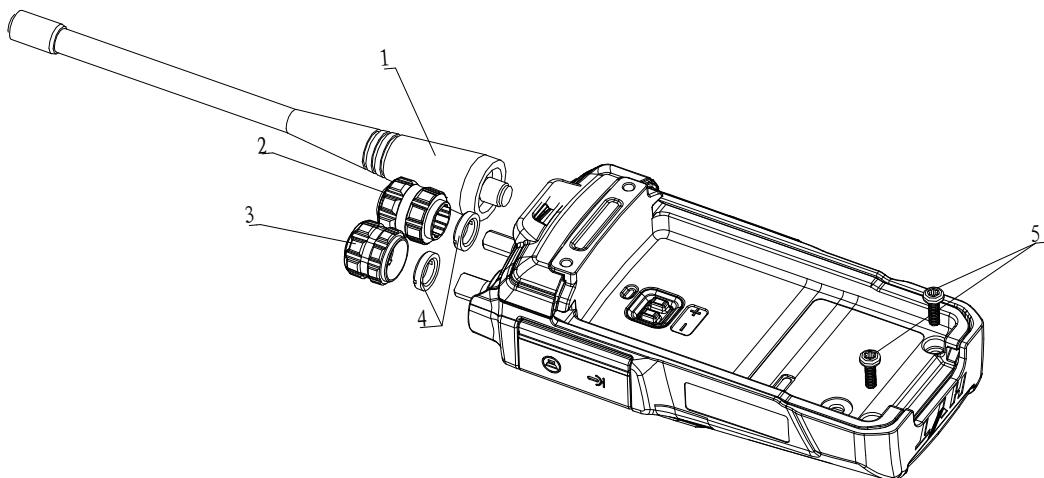

Figure 7

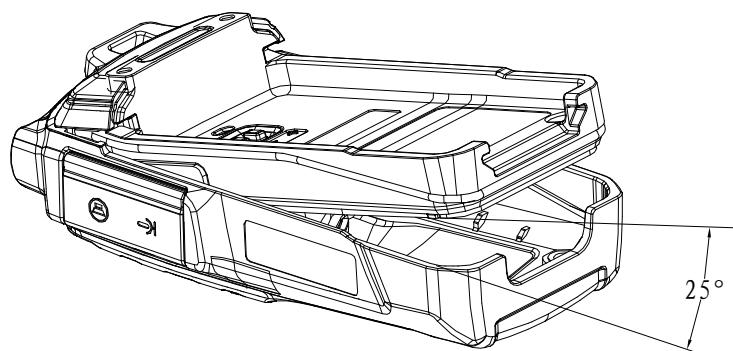

Figure 8

### Disassembling the speaker

1. Unscrew the screw shown in Figure 9, and remove the speaker fixing sheet.
2. Remove the speaker.

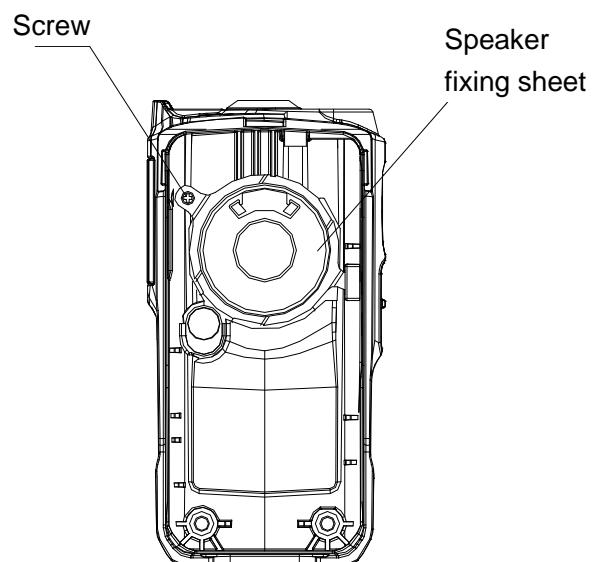

Figure 9

## Disassembling the PCB

1. Loosen the screw ⑥ (fixing the PCB) and ⑦ (fixing the PTT keypad). Then unsolder the antenna connector.
2. Remove the main board ⑧ from the chassis.

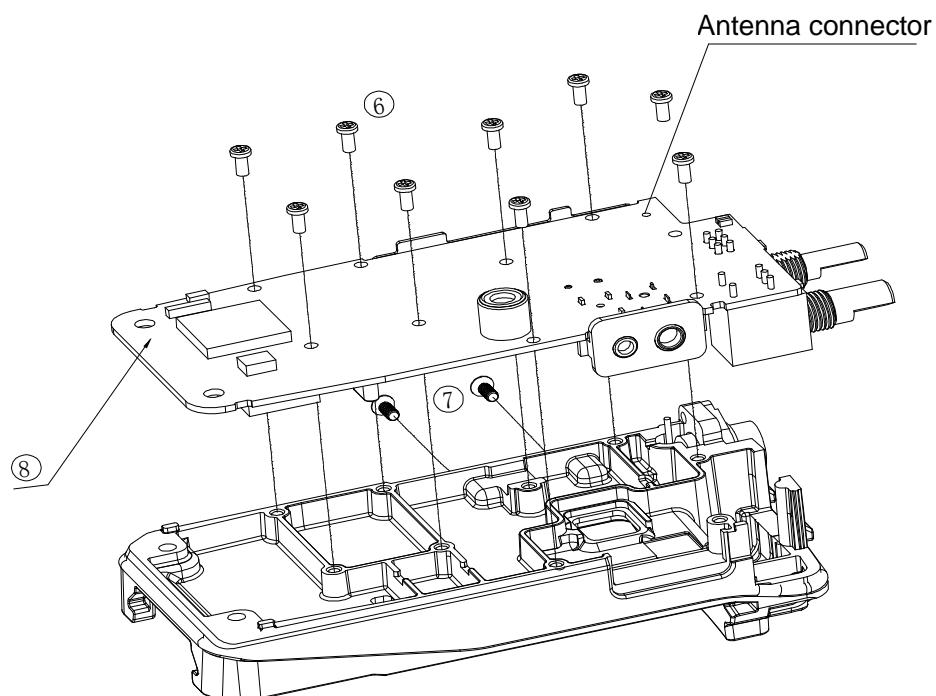

Figure 10

## Assembling the radio unit

1. Insert the speaker into the front case properly.
2. Insert the speaker fixing sheet into the front case, and fix it with a screw.
3. Make sure the antenna sleeve is properly attached.
4. Make sure the waterproof ring surrounding the chassis is well fitted into the slot.
5. Insert the antenna core into the sleeve. and solder the speaker cable to the PCB.
6. After the chassis and front case are fully assembled, press the bottom of the chassis downwards, and then secure them with the screw, so as to fit the chassis into the radio case.

**Note:** If the waterproof ring is not properly positioned after assembly, use your fingers to make it in place.

## Specifications

General	
Frequency Range	UHF1: 400-420MHz UHF2: 450-470MHz UHF3: 430-450MHz VHF: 146-174MHz
Channel Capacity	16
Channel Spacing	25KHz/ 12.5KHz
Operating Voltage	7.4V
Battery	1650mAh Li-Ion battery
Battery Life (5-5-90 Duty Cycle)	14 hours
Operating Temperature	-25°C ~+60°C
Dimensions (HxWxD) (with standard battery, without antenna)	113mmx 54mmx35mm
Weight (with standard antenna & battery)	280g
Frequency Stability	±2.5ppm
Receiver	
Sensitivity	≤0.251uV/0.282uV
Adjacent Channel Selectivity	65dB/55dB
Intermodulation	60dB
Spurious Response Rejection	65dB
Rated Audio Power Output	0.5W (Speaker impedance: 16 ohm)
Rated Audio Distortion	≤5% (0.5W)
Transmitter	
RF Power Output	4W/2W
Spurious and Harmonics	≤-26dBm
Modulation Limiting	≤5KHz (25KHz) ≤2.5KHz (12.5KHz)
FM Noise	40dB/35dB
Modulation Distortion	≤5%

**NOTE:** All Specifications are tested according to applicable standards, and subject to change without notice due to continuous development.
